

Payments

Built For Medical Providers

Treat your customers' payment information as thoughtfully as you treat your patients' medical records. Now you can keep their payment information separated with Converge.

Medical care providers have a lot of data and patient information to track. Your practice has likely invested in a world class software or service that's tailored to help you serve your patients but that software or service may not be optimized to help you accept payments. Whether you are an optometrist, dentist, family doctor or hospital administrator – it's likely that you want to keep your patient information on a secure platform dedicated for patient care and need a separate way to accept payments easily. That's where Converge comes in.

Converge is a cloud-based, secure, payment platform which enables you to accept payments from nearly anywhere with just your computer and internet connection. Healthcare organizations like yours choose Converge because we can help you:

1. Accept payments over the phone
2. Accept payments on your website
3. Send online payable invoices and quotes
4. Accept Recurring Payments
5. Accept Installment Payments
6. Save card information to bill patients late

Build Your Business with Converge

Save Your Patients' Information

Your relationship with your patients can last one visit to nearly a lifetime depending on the practice you lead. If you would like to save your patient's credit card, Health Savings Card, or Flexible Savings Card for their next visit, then Converge can do that quickly and securely. We have a built-in Customer Manager feature which allows you to save payment data and tokenize it for your patients' protection. By tokenizing the data, you're saving a version of that card information that can never be used anywhere but your business. In the event your website is breached, your patients' card information is safely stored on Converge's secured servers.

Save Your Business's Cash Flow

Cash flow is an important part of any business but for healthcare businesses, this is an incredibly difficult problem to solve. With healthcare costs rising and more patients needing to pay in installments to handle their medical needs, making payments quick and simple can help your practice get paid earlier.

Create customized payment plans by setting your patients up for installment payments. This feature is built right into Converge. Accept installment payments by credit card, debit card, or ACH. Converge has an additional feature called Account Updater which helps flag expiring or expired Visa and Mastercard credit and debit cards 5 days before a payment is due. Now, your staff can get in touch with patients to update their billing information before a payment is missed.

Send quotes and invoices so your patients can easily pay online. If you have a sophisticated website and need a way to process payments once your patients log in to manage their bills, Converge can also integrate with your website to process payments online as well.

**We make it possible.
You make it happen.**
